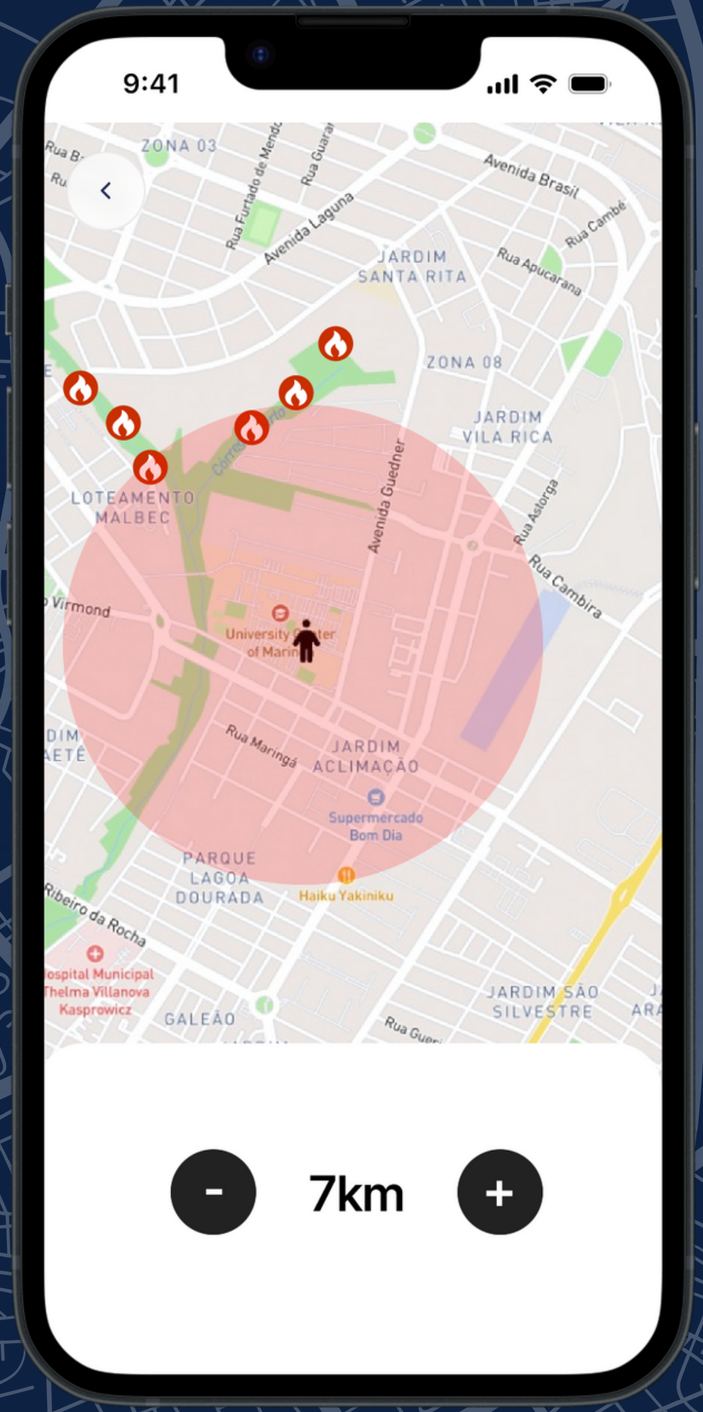
FIRE FINDER

SAILOR MOON



NASA DATA AND FIRE ALERT APPS SHARE COMMON PROBLEMS:

Inaccessible documentation. Which complicates the comprehension of the information and where to find. Consequently generating a gap between the population due to the information.

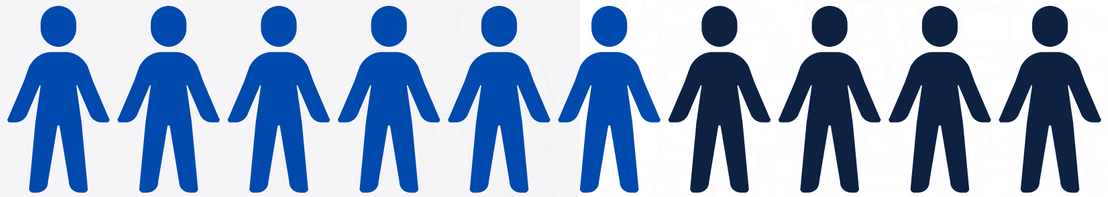
SCAN ME

HOW DOES FIREFINDER ADDRESS THIS?

It’s used NASA’S API for real-time wildfire information updates, based on satellite readings and technology for identifying brightness, heat, and steam.

Allows direct interaction with the user, who can also input data.

Provides guidance on safety measures with a pop-up.



we don't see the fire as a possibility.

Beyond technical barriers and inaccessible language, the population is unaware of the need for this information.

Therefore, the Firefinders connects people with the data that could save a life.

Wildfires.
